

# Secure Edge Networking

All-in-one managed networking, security, resilience, and compliance for all of your business locations.

## Secure Edge Networking and Your Business

Secure Edge Networking, powered by BranchSDO, is a store's "network-in-a-box" that delivers greater agility and reliability for the modern retail environment. Netsurion's [Secure Edge Networking](#) solution provides the unmatched flexibility and scalability to meet your demanding edge networking needs. So, what does this mean to you and your business?

You cannot afford disruptions – time is money. You also need to get new stores open fast and existing stores to run like a well-oiled machine. In addition, you must ensure your business is PCI DSS compliant. This requires a secure, always-on, and easy to manage network that can act as a launchpad for innovation and growth amid a rapidly changing world. Protecting data and transactions, and quickly responding to cybersecurity threats and point-of-sale (POS) internet outages are a must.

BranchSDO, our flagship edge networking platform, gives you instant insights into your network. You can also modify configurations globally or individually and deploy new locations quickly.

**Benefit from the combination of a multi-function edge device, cloud orchestration, and a 24/7 Network Operations Center (NOC) to deliver security, cellular failover, Wi-Fi, and PCI DSS compliance support to all branch locations.**

### Always-on Connectivity

Never miss a transaction with disruption-free network connectivity, segmentation, and traffic prioritization.

### Visibility and Orchestration

See the complete health and usage of all your locations' networks and make configuration changes instantly.

### Rapid Rollout

Count on simple deployments that get stores online and doing business in 15 minutes, without any on-site engineers.

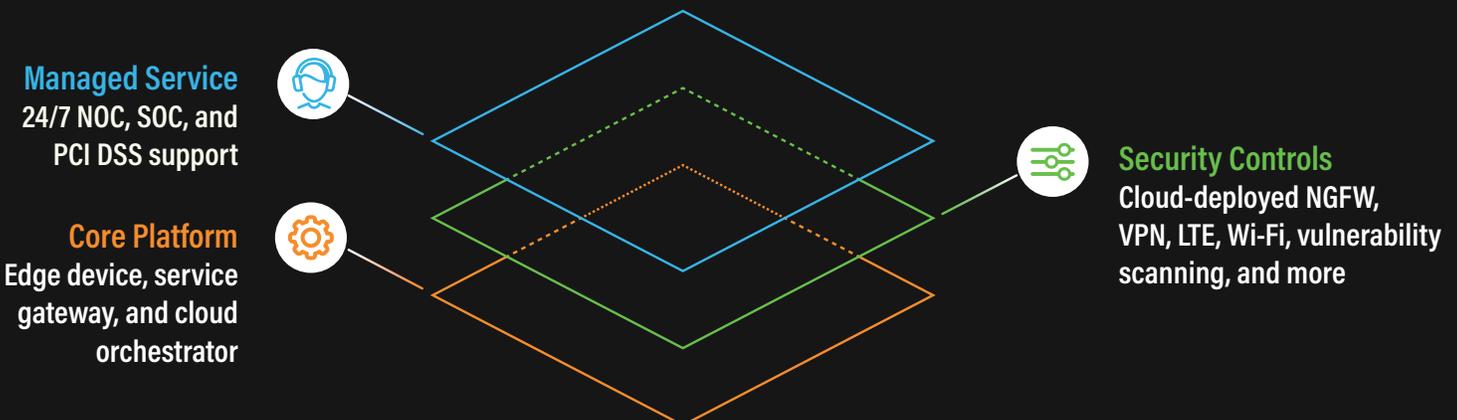

### Cybersecurity Confidence

Rest easy with advanced network monitoring, endpoint protection, and streamlined PCI DSS compliance support.

## Unmatched Scalability and Simplicity

Future-proof your cybersecurity with Netsurion's managed platform approach consisting of a powerful platform at the core, additional managed security controls consumed as a service, and the support of a fully-staffed NOC and SOC.

## Ask your team these questions

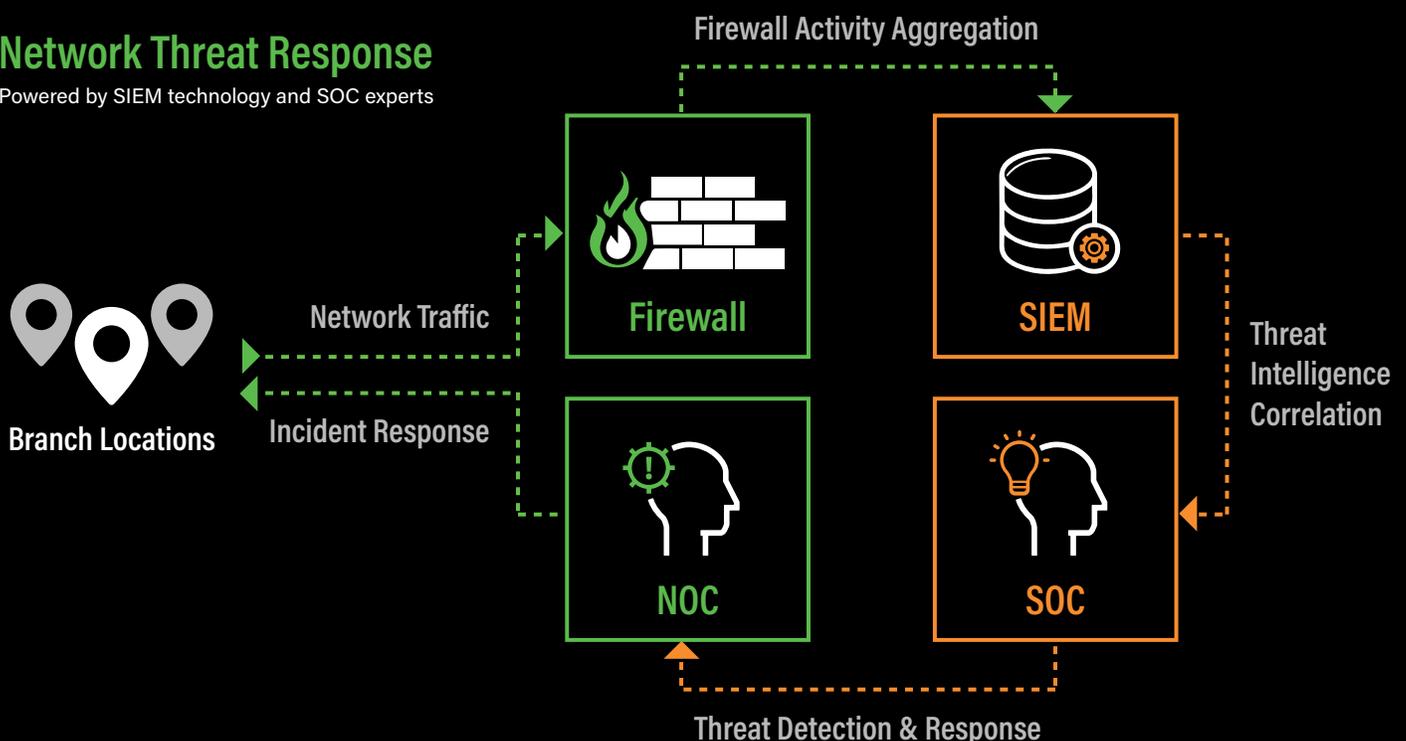

- Do you continuously monitor all the layers of defense in your firewall?
- Do you have control over all of your branch locations' networks?
- How many of your business applications rely on stable access to the internet?
- If you have ISP interruption – do you have automatic failover?
- Do you have the staff and skills necessary to protect your business from cyber threats?
- Do you have a team of network analysts monitoring and delivering security?
- What risk do you face if your supply chain is disrupted or held ransom?
- Are you able to demonstrate PCI DSS compliance?

## The Human Element of Managed Services

A multi-layered security strategy must include the talent to review and analyze logs to detect traffic anomalies and security incidents. Our [SOC](#) escalates threats to our [NOC](#), that in turn, remediates the issue or alerts your team to mitigate appropriately.

### Network Threat Response

Powered by SIEM technology and SOC experts

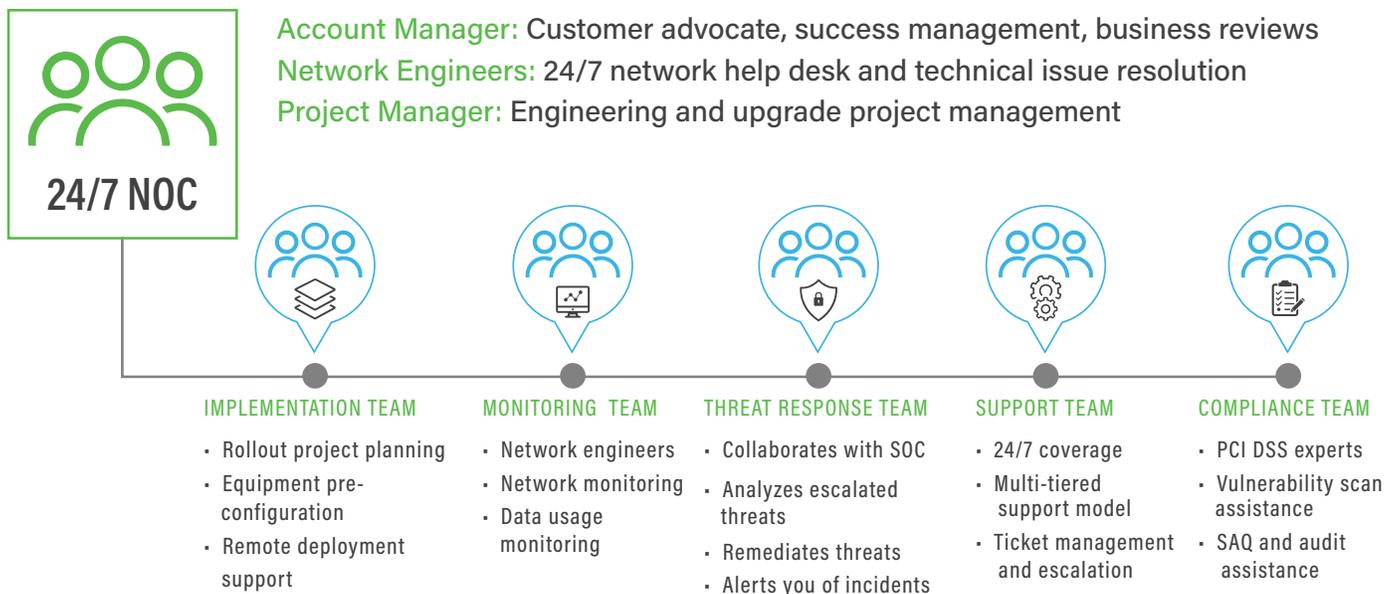

## The Right People + Technology Gives You Peace-of-Mind

Netsurion provides you with a team of experts monitoring your network and delivering both security and agility. BranchSDO offers flexible delivery models for your business. But regardless if you opt for a self-managed or fully managed solution, the NOC is always a phone call or e-mail away to support you with new deployments, policy changes, configurations, and threat mitigation across locations.

Artificial Intelligence (AI) and automation drive speed and efficiencies to predict, prevent, detect, and respond to network security threats. It takes cybersecurity experts to detect a breach caused by an advanced threat that a machine alone cannot catch. A multi-layered security strategy must include the talent to review and analyze logs to detect traffic anomalies and security incidents.

## Extend Your Team with Security Experts On-Duty 24/7

Our analysts work as an extension of your in-house team to understand your environment and proactively support your team with monitoring, threat response, and compliance.

With Netsurion, you're backed by a robust NOC delivering end-to-end support.

Entrust the right people as an extension of your IT team, to do as little or as much as you need to co-manage powerful process and technology.

### Flexible Solutions That Scale with Your Business

Get the best-fit networking solution for your organization. Our Secure Edge Networking solution is available in multiple packages that can be further customized to give you what you need today while being well-positioned for tomorrow.

*Companies that get significant value on their digital investments invest 33 percent more than other companies in technology, processes, operating models, and the ways of working that will drive their digital supremacy.*

- PwC

*More than a third of CIOs anticipate difficulty in finding appropriate skill sets in the tech areas of cybersecurity.*

- IDG

## What It's Like Working with Us

Relationships with our customers, partners, and each other are of the highest importance to Netsurion. We are more than a software and services company – we work to earn your trust as an extension of your own team. We are driven by the importance of network security and cybersecurity today and tomorrow, while ensuring accessibility by any company, of any size and budget.

## Why Choose Netsurion

It comes down to the best of both worlds – expert people + technology... an ISO-certified SOC driving our own AI-embedded threat platform, plus a NOC delivering end-to-end network and compliance support. Netsurion's Secure Edge Networking solution is deployed in minutes and can be scaled up with more powerful features and scaled out to cover more of your network as you grow. It's that simple. You have a practical way to overcome today's cybersecurity challenges, so you can get back to the business of growth and innovation.

We are passionate about providing small-to-mid-sized businesses (SMBs) with the same level of protection as the Fortune 500 companies of the world. What this means is that we provide purpose-built networking and security technology fit for only what you need. This includes value-based offerings that are affordable and flexible with managed services to supplement IT staffing.

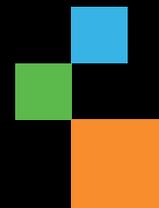

## Business Advantages of Netsurion

- Gain a team of experts monitoring your network and delivering both security and agility.
- Benefit from continuously monitored firewall protection with multiple layers of defense.
- Protect mission-critical network traffic with custom network architecture, proper segmentation, and VPN.
- Extend network connectivity at all business locations easily and securely with integrated Wi-Fi and access point meshing.
- Achieve greater command and control of all your branch locations' networks with embedded cybersecurity.
- Get next-level threat protection for all your business locations.
- Ensure business continuity and resilience with built-in automatic cellular failover, multiple carrier options, and data pooling.
- Simplify PCI DSS compliance management with a full suite of tools, scanning, templates, and expert support.

Our team sees every interaction as a partnership. We work hard to earn your trust every day. Future-proof your cybersecurity with Netsurion's managed platform approach. Learn more about Secure Edge Networking at [www.netsurion.com](http://www.netsurion.com).

Flexibility and security within the IT environment are two of the most important factors driving business today. Netsurion's cybersecurity platforms enable companies to deliver on both. Netsurion's managed platform approach of combining purpose-built technology and a team of cybersecurity experts gives customers and partners the ultimate flexibility to adapt and grow while maintaining a secure environment.

Netsurion's [EventTracker](#) cyber threat protection platform provides SIEM, endpoint protection, vulnerability scanning, intrusion detection and more; all delivered as a managed or co-managed service. Netsurion's [BranchSDO](#) delivers purpose-built technology with optional levels of managed services to multi-location businesses that optimize network security, agility, resilience, and compliance for branch locations. Whether you need technology with a guiding hand or a complete outsourcing solution, Netsurion has the model to help drive your business forward.
